

a blender where
press force determines
the speed of the
blades

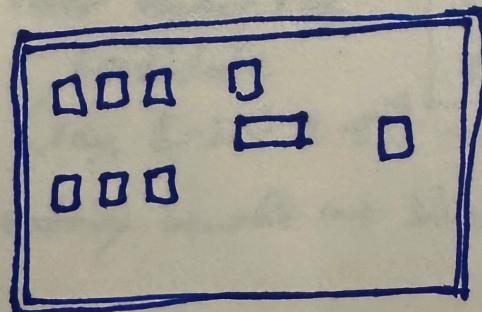

(could be wireless)

pop machine
(all through same
spigot?)

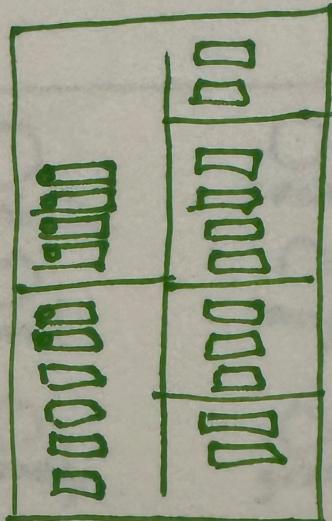

a SYMPHONY of
flavors

The obvious one!
A MIDI / OSC
controller.

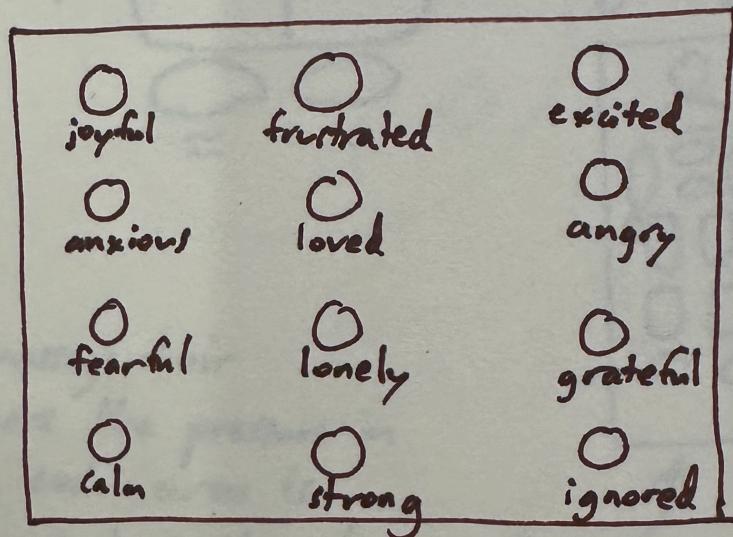

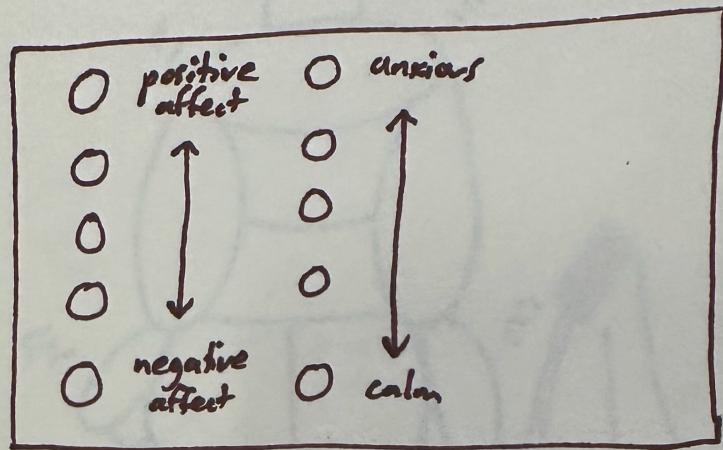

← custom window
solution -
tint/darken each
window based on
pref force
(or pull down shades?)

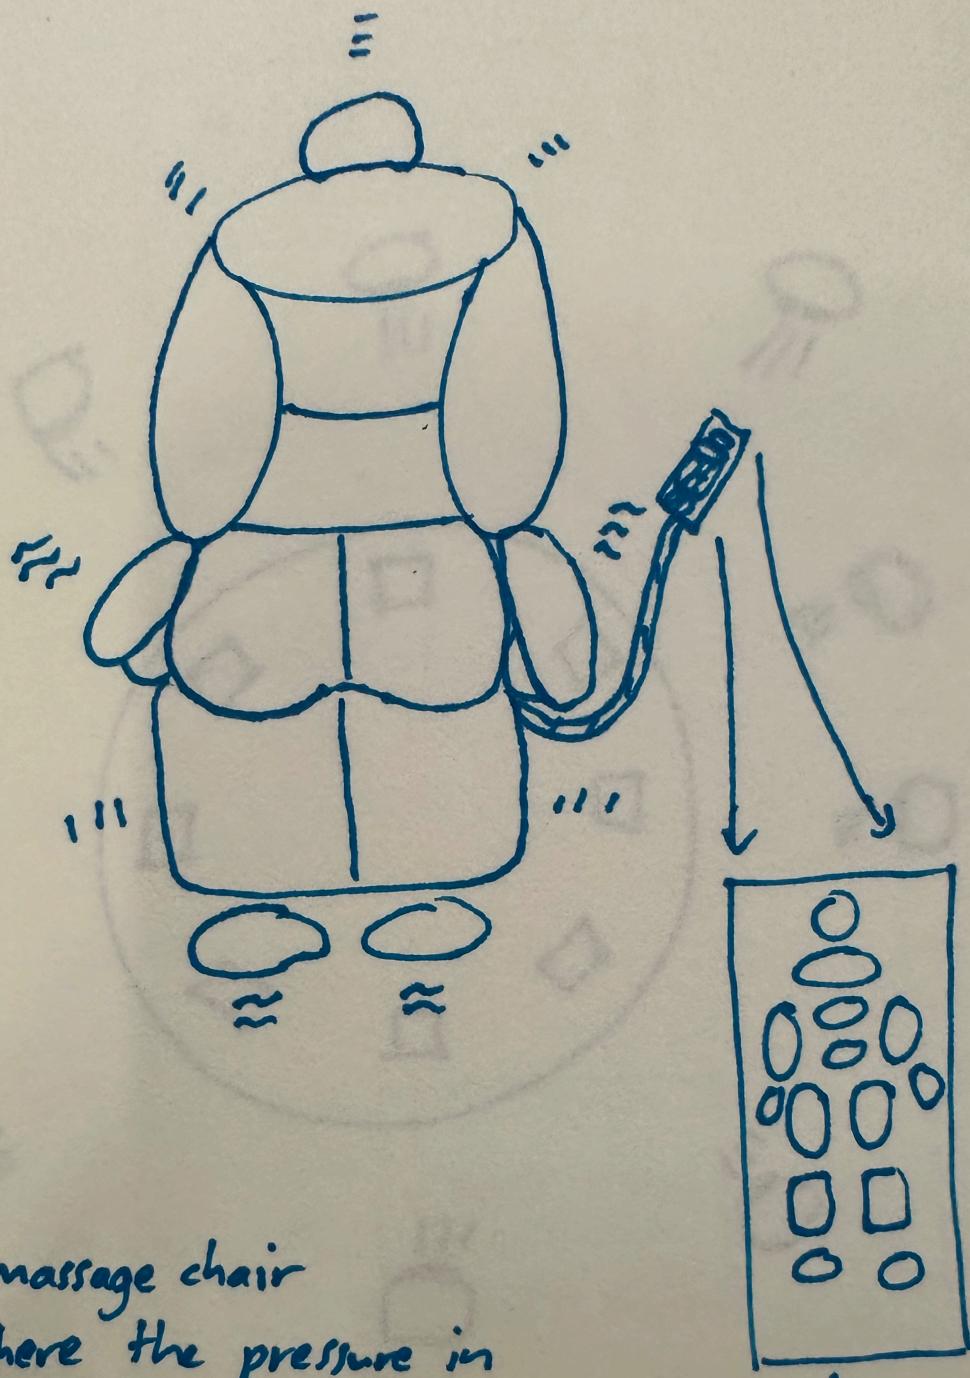

- new balloting/voting system where force of press indicates the degree to which the voter favors the candidate (say, 1-10? 1-5?)
 - secondary benefit \rightarrow blind/VI-friendly ballot

therapy journal?

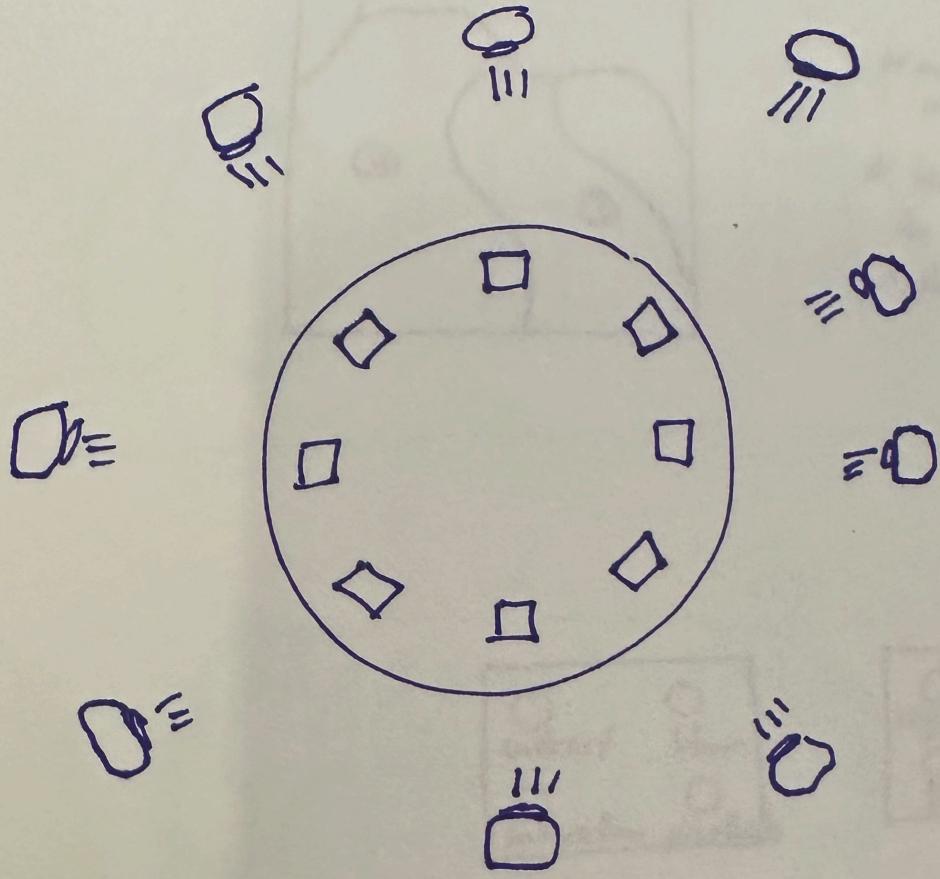

track over time, keeps metadata

• participant has
their state by
depressing or pressing
buttons with a
force appropriate to
the degree of the
effect

massage chair
where the pressure in
each area is
customizable w/ pref force

collective mixing board

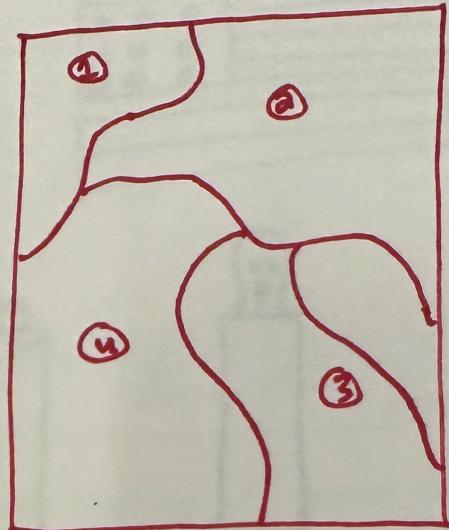

- in multi-channel installation/sound piece
- button corresponds to - volume?
- multiple ppl may be at diff buttons
 - or going on sulphur?
- algorithm for attenuating others to avoid going > certain level

providence?

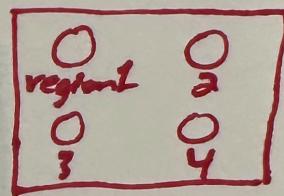

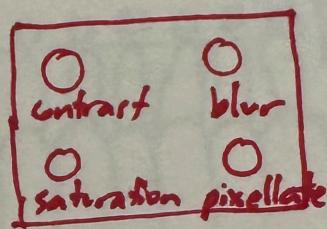

algorithm for

attenuating others to

avoid going > certain level

- * in many of these I'm using the keys like faders
- * not this one though
- * lends itself to quickly-dig applications in time

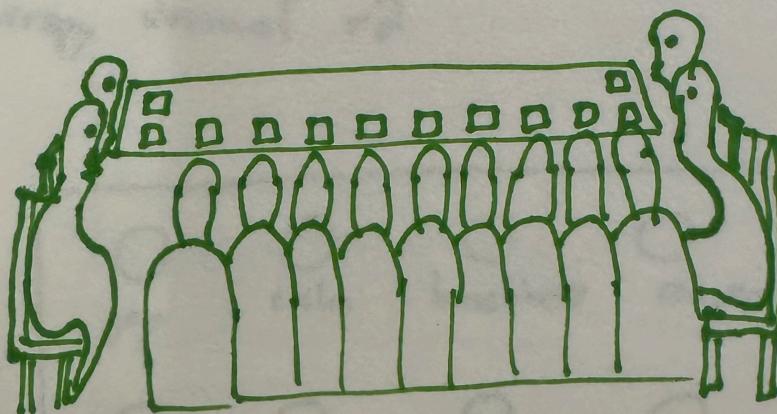

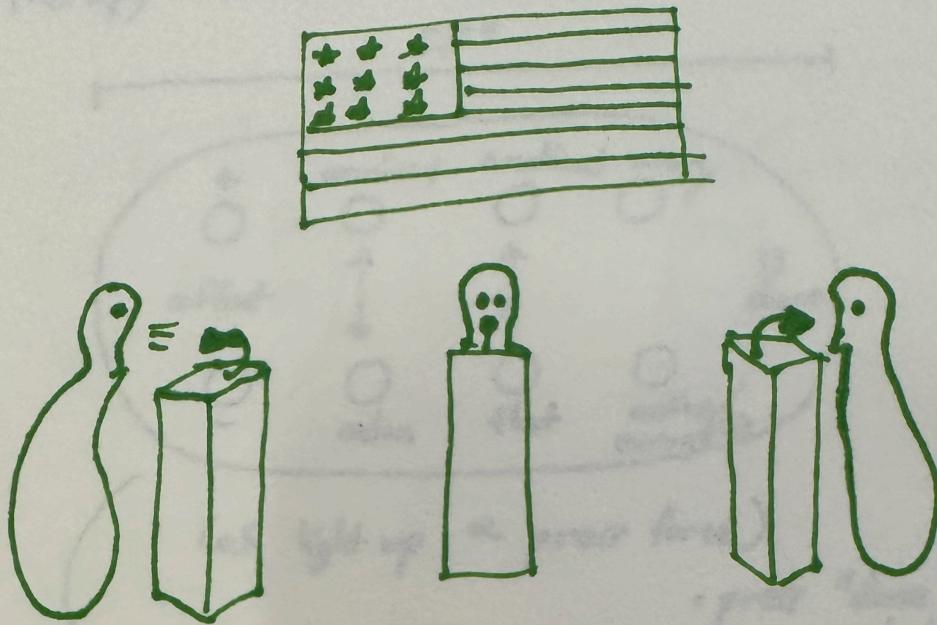

live digital painting

• reverts to default if no touch

• left Keyboard controls effects \equiv / degree
note

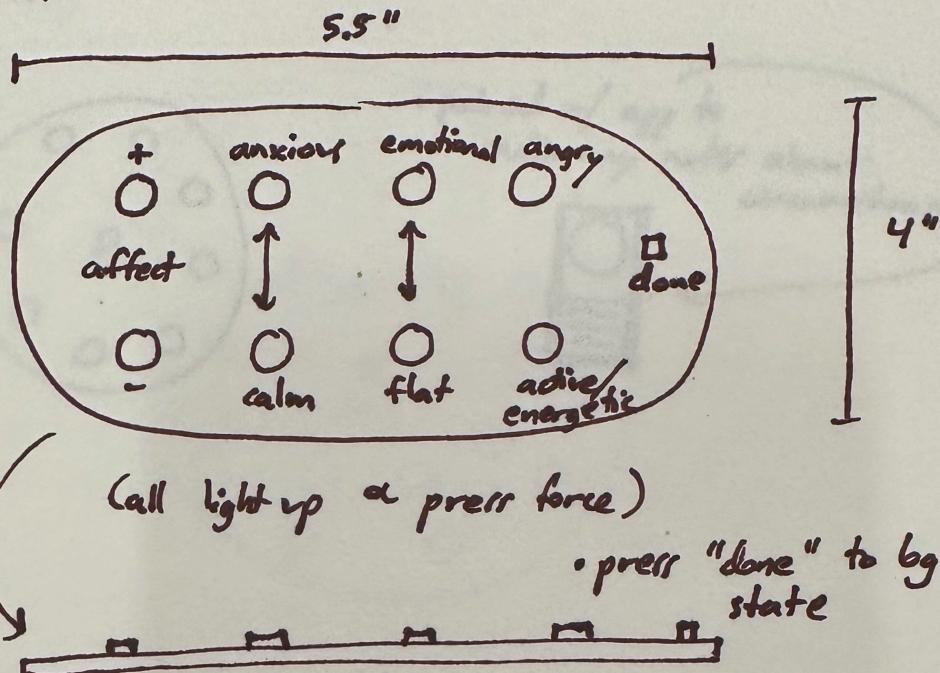

• rt. Keyboard controls \rightarrow size of region?
 \rightarrow prominence of region?

\rightarrow region(s) to which effect is applied?

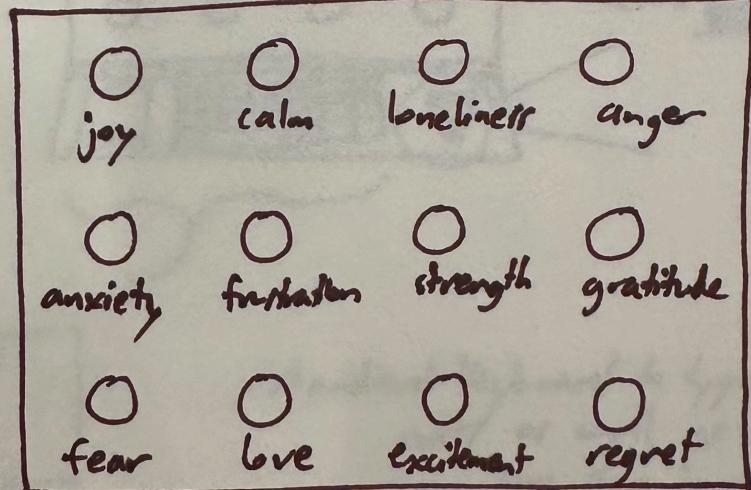

- real-time political polling
 - participants use peer force to indicate feelings of warmth toward speaking candidate
 - like political debate x The Voice

Therapy Journal v1

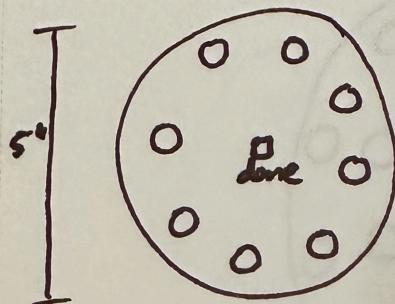

Therapy Journal v2

- no "done" button
- can spontaneously bg 1+ buttons
- a therapist should pick the states represented

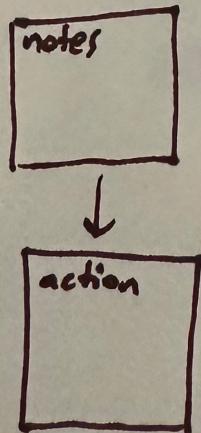

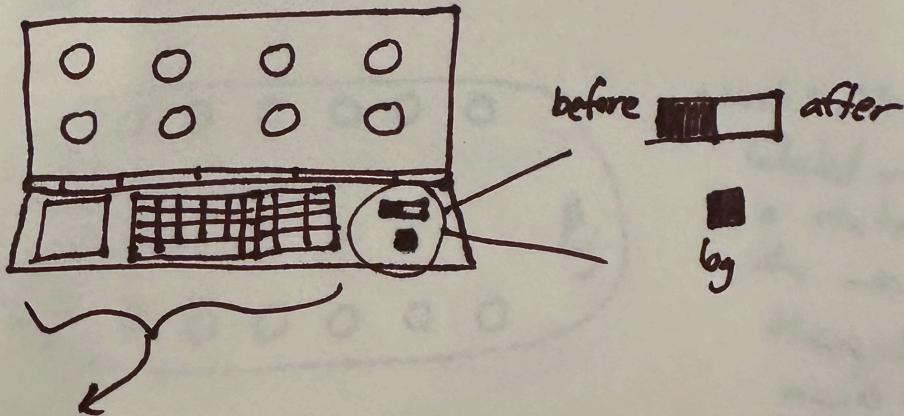

Therapy Journal v3

- paired w/ app to make any notes about circumstances

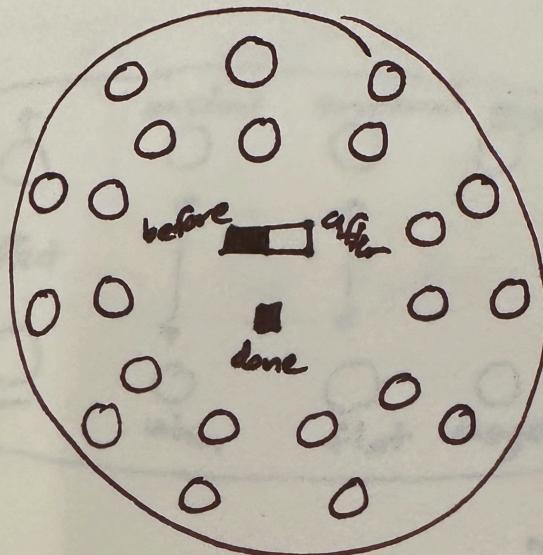

Therapy Journal v4

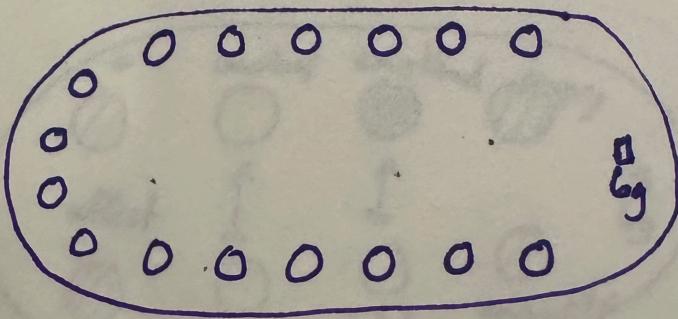

- standard keyboard to type notes as well as any action done in response
- before/after switch to log state before and after therapeutic action

Therapy Journal v5

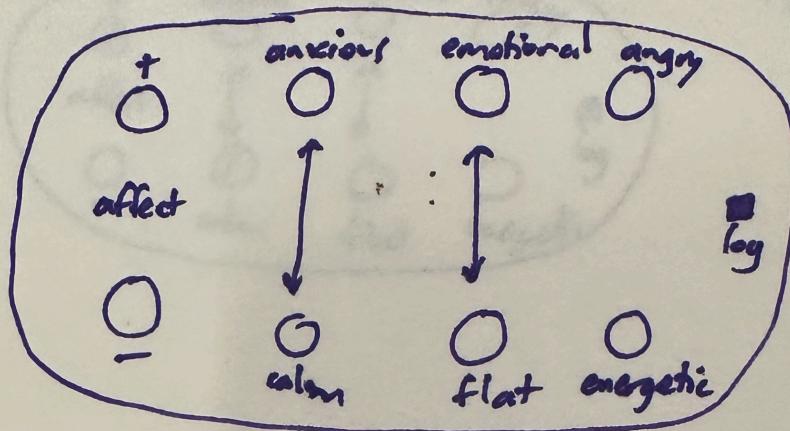

most buttons
are only
existing

Therapy Journal sketch 6

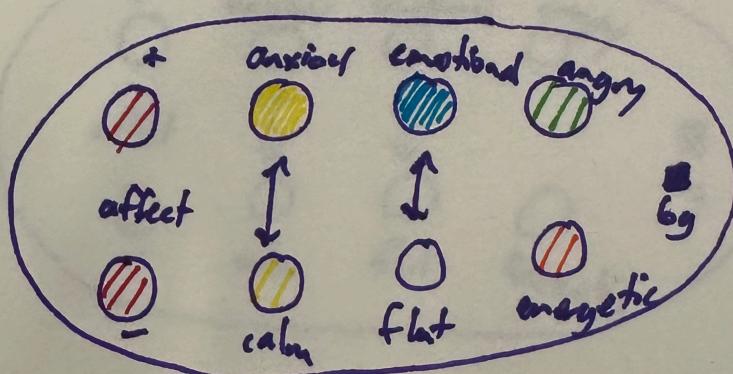

- each button labeled with a state the user or therapist wants to track

Therapy Journal sketch 7

• no two buttons
are mutually
exclusive

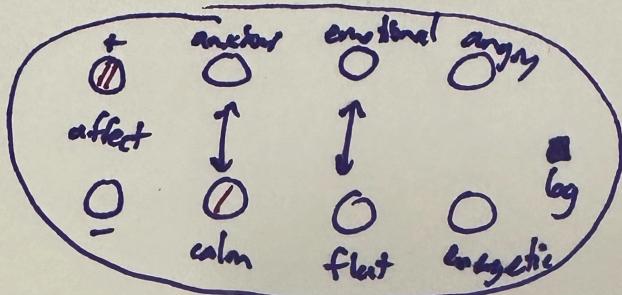

8

• after a person
has recorded
their state,
before pressing
"log"

• brightness of each key
indicates degree

9

- another valid rounded state, before pressing "bg"

10

- after "bg" pressed, derive goes back to neutral

- 'bg' may be made as frequently as desired

- 'Haven't got to be an app for this...
↳ maybe, on site, just a reflective tool
