Consent to Participate in a Pilot Study: Timbre Similarity Judgments

Principal Investigator: Molly Jones, PhD Candidate, University of Michigan School of Music, Theatre, and Dance

Molly Jones invites you to participate in a pilot study about the perception of timbre.

If you agree to be part of the pilot study, you will be asked to listen to examples of different tones and to compare them using a computer interface. In addition, you will be asked questions related to your experiences with music and listening. Total participation time is estimated to be no more than 30 minutes.

Benefits:
Although you may not directly benefit from participating in this study, others may benefit because an improved understanding of timbre perception could lead to improved audio algorithms for applications as diverse as VR, assistive

hearing, and music creation.

Risks and discomforts:
The researchers have taken steps to minimize the risks of this study. Even so, you may still experience some risks related to your participation, even when the researchers are careful to avoid them. These risks may include hearing fatigue.

Compensation:
You will not be compensated for your participation.

Voluntary nature of the study:
Participating in this study is completely voluntary. Even if you decide to participate now, you may change your mind and stop at any time. If you decide to withdraw early, your data will be excluded from the study and immediately destroyed.

Contact information:
If you have questions about this pilot study, including questions about scheduling, you may contact Molly Jones.

By clicking the below button, you are agreeing to be in the study. Be sure that questions you have about the

study have been answered and that you understand what you are being asked to do. You may contact the researcher if you think of a question later.

Study Instructions

For each of the following questions, please indicate whether tone A or B is more similar to the reference tone. These tones are randomized, so they may seem very different. Please just make your best guess as to which tone is more similar.
